

AntiStress

IMPROVING PERFORMANCE

Jacquard Textile, together with our design partners in Italy, are continually dedicating time and energy to research and develop a range of new characteristics. These help to add significant value to our products and offer reassurance to our customers that the fabrics really can perform.

The world surrounding us is full of radio waves, static electricity and magnetic fields, which are added and exchanged as electrostatic charges to our body during the course of the day.

Even during sleep friction between sheet, covers, night clothes, generates static electricity. This build up of static electricity causes tension and a feeling of nervousness and agitation.

To counter this and enhance the quality of rest and sleep we offer "Anti-Stress". A collection of fabrics which convey static electricity away from our body and create a relaxed sleeping environment for a perfect tension free night's sleep.

How it works

- Conductive particles are woven or knitted into the fabric itself.
- The conductive particles absorb electrons through ionisation and discharge them into the air.
- Static charges are reduced, lowering the tension on our body constantly keeping it at the lowest level.

Benefits

- Reduces static tension helping our body to relax and re-energize.
- Creates a stress-free sleeping environment allowing for a better quality sleep.
