

Bamboo

NATURAL LIVING

Nowadays there is more and more talk about the importance of nature and the environment. We feel a strong desire to surround ourselves with natural products and live in harmony with the world around us. In response we have a complete collection of fabrics with natural yarns provided by Mother Nature.

Bamboo

Bamboo fibre is made up of 100% cellulose – the bamboo fibres themselves are very fine which gives the yarn and fabric a super soft touch.

How it works

- The process of fibre extraction from the bamboo tree enables one to obtain very fine but surprisingly strong fibre, giving bamboo fabric a very soft touch.
- The cross section of the bamboo fibre demonstrates a series of tiny cavities – which produce excellent fibre ventilation and better moisture absorption, allowing bamboo to absorb moisture and dry quickly.
- The bamboo tree possesses a natural or “bio-agent” named “Bamboo Kun” – which is a natural defense against bacteria. Bamboo Kun is inherent in the bamboo fibre, offering natural antibacterial and anti-odour properties to bamboo fabrics.

Benefits

- Natural antibacterial properties
- High moisture absorption
- Anti-odour
- Soft to touch
