

Cool Smart

IMPROVING PERFORMANCE

Jacquard Textile, together with our design partners in Italy, are continually dedicating time and energy to research and develop a range of new characteristics. These help to add significant value to our products and offer reassurance to our customers that the fabrics really can perform.

Cool Smart

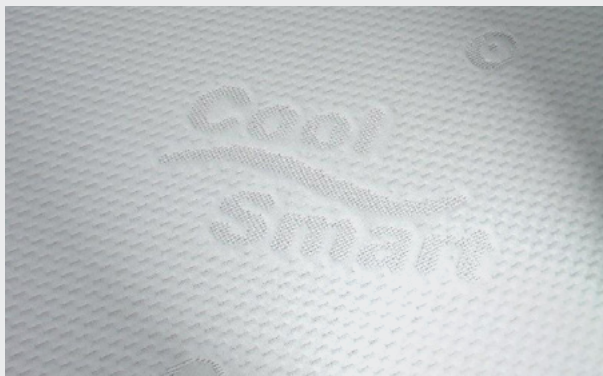

Cool Smart fabric is able to absorb and dry moisture very quickly, offering a pleasing effect of freshness and dryness. For Cool Smart to sufficiently dry requires half the time normally utilised with similar cotton.

How it works

- The Cool Smart thread section is in cross form which differentiates it from other traditional fibres.
- This form permits the Cool Smart thread to quickly absorb moisture produced by the human body.
- The moisture control permits the products to regulate the temperature of the human body.
- Due to it having 30% more surface over normal fibres, Cool Smart permits the moisture to evaporate much more quickly.
- Given that characteristics are intrinsically in the fibre, it means that they don't vary with the passing of time or after repeated washing.

Benefits

- Freshness and dryness
- Comfortable
- Durable
- Cool feel
