

Hydrofriend

IMPROVING PERFORMANCE

We are continually working with our design partners at Stellini in Italy, who have dedicated time and energy to research and develop a range of new characteristics. These characteristics help to add significant value to our products and offer reassurance to our customers that these fabrics really can perform.

Hydrofriend

The mattress fabrics market is constantly evolving. Price is no longer the decisive factor. Today innovation and technical characteristics make the difference. The fabrics, both jacquard and knitted, must be soft to the touch, elastic, comfortable but above all able to adapt to the body and its needs.

The demand is therefore increasingly oriented towards high quality products, able also to guarantee a longer life of the

mattress. Hydrofriend, a special finish which gives mattress fabrics technical characteristics able to make the difference such as the capacity to rapidly absorb moisture, or the anti-static and anti-pilling effect, is the answer to this need.

How it works

- Hydrofriend is a special finish that gives mattress fabrics technical characteristics able to make a difference to performance, such as the capacity to rapidly absorb moisture, improve antistatic properties and improve the anti-pilling effect. Hydrofriend is also durable and offers hygiene and maximum comfort.

Benefits

- Soft to the touch
- Absorbs moisture
- Durable
