

Silk

NATURAL LIVING

Nowadays there is more and more talk about the importance of nature and the environment. We feel a strong desire to surround ourselves with natural products and live in harmony with the world around us. In response we have a complete collection of fabrics with natural yarns provided by Mother Nature.

Silk

For centuries silk has had a reputation as a luxurious, sensuous fabric, associated with wealth and success. Silk is one of the oldest textile fibres known to man. Silk fabric creates a first class sleeping environment. This all-climate, highly absorbent fabric with luxurious softness ensures quality sleep.

How it works

- Because of its natural protein structure, silk is the most hypoallergenic of all fabrics.
- An all-climate fabric, silk is warm and cosy in winter and comfortably cool when temperatures rise. Its natural temperature-regulating properties give silk this paradoxical ability to cool and warm simultaneously. Silk garments thus outperform other fabrics in both summer and winter.
- Silk is highly absorbent; it can absorb up to 30% of its weight in moisture without feeling damp. Silk will absorb perspiration while letting your skin breathe.
- It is the strongest natural fibre, is wrinkle and tear resistant, and dries quickly.

Benefits

- Absorbs moisture
- Kind to skin
- Smooth and shiny
- Comfortable
- Relaxing
